DDOS MITIGATION SERVICES

MAINTAIN NETWORK AVAILABILITY AND SECURITY

It is not a question of if but when.

DDoS attacks are increasing in size, frequency, and complexity. You need an advanced defense strategy to help mitigate volumetric and application-layer DDoS attacks. These attacks can lead to network downtime and drive up bandwidth costs.

QTS DDoS Mitigation Services helps maintain network availability and security by removing malicious traffic before it reaches your network. Utilizing Arbor Networks, QTS provides real-time internet threat intelligence with comprehensive mitigation and service protection. QTS DDoS Mitigation Services integrates network-wide intelligence and anomaly detection with carrier-class threat management to help identify and stop network and application-layer DDoS attacks.

ACTIVE, CONTINUOUS MONITORING: Automatic analysis of Internet traffic with re-routing of attacks through a cleansing center to remove threats.

COMPREHENSIVE: Mitigate both volumetric and application layer attacks.

COST-EFFECTIVE: Network-based service requires no additional hardware.
