

BRIDGING Cloud & Colocation

What if...

- ✓ What if you could get short-term colocation on the AWS Marketplace, today?
- ✓ What if you could spend less time managing your AWS Infrastructure?
- ✓ What if you could speed up your colocation app's connectivity to AWS?

Short-term Colocation

Month-to-month colocation, available on the AWS Marketplace.

Designed in collaboration with AWS, CloudRamp is a hybrid cloud solution that lets you simply and efficiently manage those workloads not yet ready for public cloud, in a secured and compliant QTS colocation facility, while retaining full access to your AWS resources.

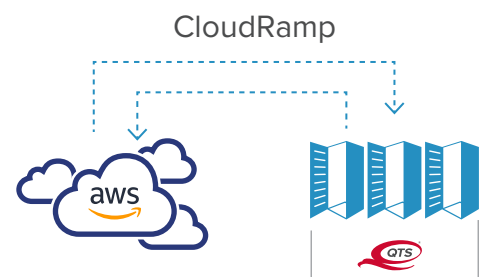

- + **Turnkey hybrid colocation.** We've prebuilt your cabinet with space, power and redundancy, and preconfigured your data hall for high-speed connectivity to AWS Direct Connect.
- + **Secure and compliant colocation.** Apt for regulated workloads requiring PCI, HIPAA, or FISMA compliance, latency-sensitive workloads.
- + **Cost-effective colocation for short-term projects.** Ideally suited for proof-of-concept, DevOps, and cloud migration projects, now you can get started quickly and without an annual contract.

Apps are on the move.
62% of colocation customers moved applications to the public cloud and 41% moved applications back to colocation facilities in the same two year period.

– 451 RESEARCH GROUP

BENEFITS

- ✓ **Deploy in days, not weeks**
- ✓ **Share workloads between environments**
- ✓ **Month-to-month billing**

Managed AWS

Our AWS certified engineers manage your environment. We focus on scalability, performance, security, and disaster recovery so you don't have to.

- + **24x7x365 monitoring.** Provides the support and technical expertise required to optimize your workloads and right-size your environments to keep your costs in line.
- + **Technical expertise.** Our Certified-AWS engineers design and tailor solutions to scale to your precise business needs.
- + **Enhance automation.** Innovative cloud Bots continuously monitor your AWS accounts against defined security, compliance, and cost savings thresholds and take corrective actions based on conditions.
- + **Accelerate your public cloud deployment.** We can harvest your current environment and begin managing on day one or help you migrate apps and workloads to the cloud.

AWS Direct Connect

AWS Direct Connect lets you establish a secure, dedicated network connection between your private infrastructure and QTS' AWS Direct Connect node bypassing the Internet.

- + **Faster throughput of large data sets.** Bypass your Internet provider and transfer mission critical data directly from your colocation environment.
- + **More stable connection.** Applications requiring real-time data feeds are more stable when you have reliable network latency.
- + **Higher security standards.** Your traffic goes over a private network connection versus an internet based connection.

Cloud-Ready Colocation, Tailored

QTS and AWS experts collaborate to design tailored solutions that are purpose-built and AWS connected to meet your unique hybrid cloud needs.
