

AWS DIRECT CONNECT

Connect directly and privately to Amazon Web Services

Amazon Web Services® Direct Connect allows you to establish a dedicated network connection between your infrastructure and the AWS Direct Connect location available in the QTS Chicago data center. You will have access to the entire suite of AWS cloud services including S3, EC2, Glacier and others.

Establish a high-capacity, secure connection which, in many cases, will allow you to reduce network costs, increase bandwidth throughout, and provide a more consistent network experience than Internet-based connections.

USE AWS DIRECT CONNECT FOR

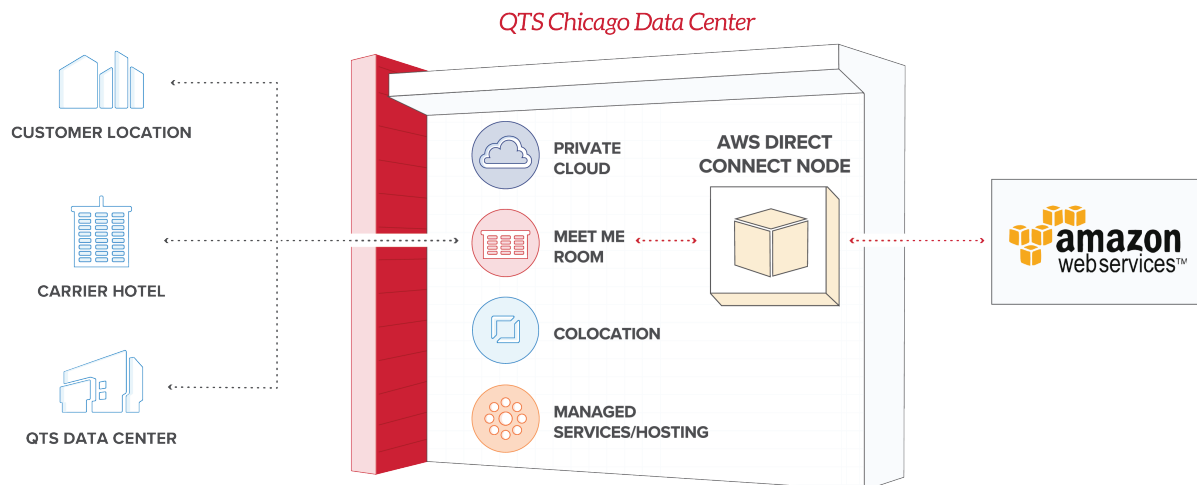

Data Transfer: Transfer large amounts of data with guaranteed network performance

Security: Private connection allows secure data transfer

Complete Access: Connect to AWS services including S3, EC2, Glacier and others

KEY BENEFITS

- Consistent network performance
- Secure, reliable connectivity to Amazon Web Service
- Unlimited bandwidth

AWS Direct Connect services are currently offered in the Chicago Data Center via the AWS Direct Connect Node. Additionally, all QTS locations offer QTS cloudConnect which provides access to Amazon Web Services or Amazon VPC.
