

HOSTED PRIVATE CLOUD

HIGH PERFORMANCE, PHYSICAL ISOLATION, AND CONTROL

QTS' Hosted Private Cloud provides dedicated hyperconverged infrastructure in our secure, compliant data centers and is designed for enterprise workloads that may not be well suited for multi-tenant cloud environments.

If you want the benefits of virtualization and software defined infrastructure without the management burden in a single-tenant environment, QTS' Hosted Private Cloud provides the ideal platform with no large up-front capital investment at a predictable monthly cost. You may have specific regulatory requirements that dictate your data and applications be isolated from other customers and surrounded by heightened security defenses. Whatever reason you are considering a hosted private cloud, QTS can tailor the solution to best meet your business' needs.

Our experts consult with you to design, deploy and manage your environment providing support 24x7x365. Our HPC environment provides the performance and scalability you require to run a variety of different workloads, at any scale, on a single platform. Our Operation Service Center (OSC) manages your private cloud infrastructure up through the hypervisor, taking on the routine management tasks including deploying, configuring, maintaining and optimizing your infrastructure.

QTS is committed to providing the highest possible level of service. Our industry leading Net Promoter Scores (NPS) give you the confidence to free up your people to focus on more strategic initiatives for the business because you know QTS has your infrastructure needs covered.

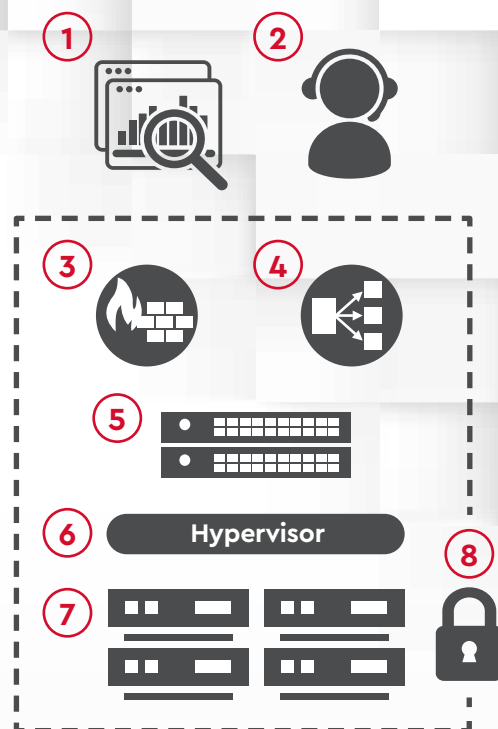

BENEFITS

- No large up-front investment
- Managed through the hypervisor
- Non-disruptive upgrades to the HCI software platform
- Optimal performance for critical applications
- Highly resilient with no single point of failure
- Advanced tools for visibility into public and private cloud assets
- Solution Portability to shift spend with QTS as your business needs change

INCLUDED WITH QTS HOSTED PRIVATE CLOUD

- 1 Unified View into Hybrid Cloud Environments
- 2 24x7x365 Support for Infrastructure & Hypervisor
- 3 Physical or Virtual Redundant Firewalls
- 4 Physical or Virtual Load Balancers (optional)
- 5 Redundant 10G Switches
- 6 Choice of VMware ESXi or Nutanix AHV
- 7 Hyperconverged Highly Scalable Compute and Storage Nodes
- 8 Secure Space & Power

ADD-ON SERVICES

Managed Backup

QTS' Managed Backup protects virtual workloads, databases, and primary storage within your Hosted Private Cloud environment. We protect your sensitive information from corruption, compromise or loss by making a copy at regular intervals to a protected storage target. QTS can also provide a Managed Backup solution that includes Long-Term Retention (LTR) and cloud archival to AWS.

Security Services Powered by Alert Logic

As an add-on service to Hosted Private Cloud, we provide a multi-layer approach to security with our optional services including Private Cloud IDS, Log Management, Web Application Firewall, and 24x7 SOC services.

Managed OS

The same teams that watch over your infrastructure and hypervisor can take over the management of the VM layer with proactive OS monitoring, support, patching and endpoint protection for your Hosted Private Cloud VMs.

Network Services

Hosted Private Cloud is delivered in carrier neutral data centers where you can purchase internet connectivity from QTS or bring your own from a carrier of your choice. You can also leverage QTS Switchboard for seamless, automated connectivity to other QTS data centers and public cloud service providers.
